TO OUR PATRONS

The following pages illustrate and describe articles manufactured by us.

OUR AIM

Is to furnish promptly a product which is **Mechanically Correct** and **Economical in Use**.

When ordering, be careful that your instructions to us are clear and positive, leaving no room for doubtful meaning. By referring to figure number and giving full specification you will frequently avoid the necessity of holding shipment for more definite instructions.

We are prepared to handle special work in Floor, Shower, and Roof Drains and will be pleased to make estimates upon receipt of your drawings and specifications.

All orders will be entered subject to the following conditions: Serious fires, strikes, differences with workmen, accidents to machinery, or other causes unavoidable or beyond our control shall excuse any delay in filling the orders. Any goods proving defective when used for the purpose manufactured will be refurnished, but no claims for labor or damage will be allowed.

Our terms are 2% Cash in Ten Days, or Thirty Days Net.

Josam Mfg. Co., Cleveland, O.

Patented May 28, 1907
No. 203

Josam Double Drainage Drain with heavy Cast Iron body and Nickle Plated adjustable brass strainer and collar. This drain is for concrete, tile, marble, or any composition floor, especially designed for Showers, Urinals and Floors where construction requires a swinging joint being made necessary when obstructions are formed in the floor by reinforcing rods, beams, joists, etc., this swing joint avoids these obstructions and also

forms trap or seal. The adjustable Strainer and Collar which screws into body of Drain provides for all variations and thicknesses of floor, and are made in 4", 5" and 6" in diameter.

No.	Strainer	Outlet	Price
201	4"	2"	\$11.00
203	5"	2"	12.00
205	6"	2"	13.00

Patented May 28, 1907

Drains are furnished Black Asphaltum Coated unless otherwise specified. Galvanized or all brass at added cost.

We can furnish Strainer for this drain which will fit Porcelain Urinal and Shower Receptor.

Soil pipe connectors extra.

U. S. Government Type No. 203A

Patented May 28, 1907

Josam Double Drainage Combined Trap and Drain having Brass Strainer and Collar, which screws into body of Drain, and is adjustable to suit variation and thickness of floor, the body of this drain is of heavy Cast Iron. This drain is especially adaptable for shower, urinal, and floor drains for floors of concrete, cement, tile, marble, or any composition con-

struction, and is a positive assurance against leaks to the ceiling below by catching seepage, which occurs between strainer and floor construction, this seepage is caught by extended flange or cup and carried back to drain pipe, through the drainage holes therein, thereby comprising Double Drainage.

Patented May 28, 1907

Made with hub or screw outlet. Galvanized Additional

U. S. Government Type **No. 2003A**

Patented May 28, 1907

Josam Double Drainage Combined Trap and Drain of special shallow type. This drain is made for use in toilet room floors, shower compartments, dressing room floors, as well as in any floor of a shallow depth of floor construction, where drains are required.

This drain has the additional feature of providing a means of making the entire shower, wash, toilet or any other room in which it is used absolutely leakless to ceiling below, by using sheet lead or waterproofing and flashing in extended flange or cup and clamping same permanently in place by the ring and bolts.

This drain is especially adaptable for hospital, institution and gymnasium construction, and can be furnished with white metal or Benedict Nickel Strainer and Collar, is cast iron body and trap, and having the same adjustable features as our other drains, to suit the variation of floor thickness and level. Also made in All Brass Traps.

Strainers furnished concave, convex or flat, and same can be adjusted to suit variation of floor thickness.

Soil pipe connectors extra. Galvanized Additional

No.400 Patented May 28, 1907

Josam Double Drainage Roof Drain with Sediment Cup. Having combined strainer and sediment cup, this drain can be used on concrete as well as wood construction flat roofs. Its advantages are: of catching all leakage which may occur between the drain and the construction,

also of catching all tar, gravel or other sediment in strainer cup, which is detachable and easily removed. This drain is tapped standard iron pipe thread. All Cast Iron. We also furnish soil pipe end of all sizes. *At additional price.*

Josam Double Drainage Combined Trap and Drain with Back Water Valve Attachment, with double seat in which ball valve operates, in case of back water the ball valve closes against the upper seat and in case of evaporation or syphonage the ball valve lowers as the water level lowers and when this level reaches the point of breaking water seal the ball valve seats against the lower seat and prevents the sewer gas from escaping to the room.

This type of trap being especially necessary where floor drains are installed in toilet rooms, etc., where there is a possibility of water backing through floor drain from other plumbing fixtures.

Patented May 28, 1907

No. 800

Josam Double Drainage Combined Floor Drain and Bath Trap. In this drain we have the new idea and requirement of bath tub trap which is a floor drain as well as back water trap, we also incorporate our exclusive Double Drainage Feature in this trap. With this trap installed floors may be flushed without fear of leakage to the ceiling below, making the wiping and mopping of these floors unnecessary by having this surface drain to carry off water.

Patented May 28, 1907

This illustration shows our No. 2003A special shallow type combined trap and drain having a 6" large water way strainer and a 2" hub or screw end outlet, with the lead flashing as applied to the general concrete construction with tiled surface or floor, you will note that this drain can be used in any floor of a thickness of $6\frac{1}{2}$ " or more and has the extended flange or cup (marked A) with drain holes (B) therein leading into the main body of the drain (C); also note lead flashing (D), which is clamped between metal ring (E) and flange (A), by means of screws (F,) thereby making a positive water proof line in construction and any leakage getting through the surface of the floor at any point is caught by this water proof line and drains through holes into drain pipe. When installing this or any other **Josam Drains** see that the small drain holes (B) are protected sufficiently to prevent thin cement from filling these holes, this can easily be accomplished by using a moist mixture of cement or concrete, or a strand of plumbers oakum, and placing a small amount of same in front of holes before permanent floor is layed, these holes can also be easily cleaned by removing top strainer (after floor is layed) and probe out holes from the inside of drain as the holes are conveniently accessible from the inside.

Patented May 28, 1907

INSTALLATION OF NO. 800 TRAP.

The above illustration shows how our No. 800 combination floor drain as installed in conjunction with bath tub and receiving waste of same as well as being a drain for bath room floor at the same time.

Patented May 28, 1907

Showing Josam Double Drainage trap and drain as installed in conjunction with shower bath stall.
